

**messy
pup**

mixing instructions

Each packet makes 10 litres (1 bucket) of gunge.

- 1** Fill a bucket with 10 litres of **WARM** water
- 2** While quickly mixing the water with your hand or electric mixer, quickly add all of the gunge powder
- 3** Continue to quickly mix – the mixture will start to thicken
- 4** Leave the gunge for at least 20 minutes to allow the mixture to thicken correctly and cool to a safe temperature
- 5** It is important that you mix quickly and add all of the powder at once, otherwise the gunge will become lumpy

notes

- Using cold water will mean the powder will not mix correctly.
- Ensure the very bottom of the bucket is mixed as powder will fall to the bottom.
- Add more warm water for a thinner gunge.

removal

- Once finished, simply add cold water and the gunge will dilute.
- Messy Pup is naturally biodegradable and can therefore be disposed of down a drain.

cleaning advice

Messy Pup is easy to clean and will dilute with cold water, however we cannot guarantee that the product will not stain. Therefore ensure all soft furnishings and carpets are protected and covered. Wear old/cheap clothing and clean clothing immediately after use. Surfaces should be washed down using warm water and cleaning products as soon as possible.

safety

Messy Pup is non-toxic. Gunge will cause surfaces to be extremely slippery, please be careful and ensure there are no hazards in the area of use. If gunge irritates the eyes then rinse with warm water. Do not consume large quantities of gunge. Always supervise children. Use responsibly. Messy Pup cannot take responsibility for any injury sustained from using gunge.
